If you know what you want, and have a plan to receive and analyze your research data, submit your data request and you can expect:

- Iterative process
- Elapsed time: weeks to months
- Expertise will be needed to evaluate large data sets
- All regulatory requirements, such as IRB approval, must be in place before an analyst will work on your request
- Timeliness of delivery is predicated on completeness and complexity of your request including specifics such as which ICD-10 codes you need, date ranges, definitions, etc.
